Before you start

Check your local permit office before you build: rules for keeping hens, setbacks, and wind and snow loads differ from place to place.

Wear eye and ear protection, and gloves when you handle hardware cloth. Raising the long walls and setting the ridge are two-person jobs.

This free version walks through the five stages of the build: a raised hen house and a covered walk-in run under one roof, for 4 hens.

1 SILL FRAME

A frame of treated 4x4 sills lies level on a strip of crushed stone and is held down by ground anchors.

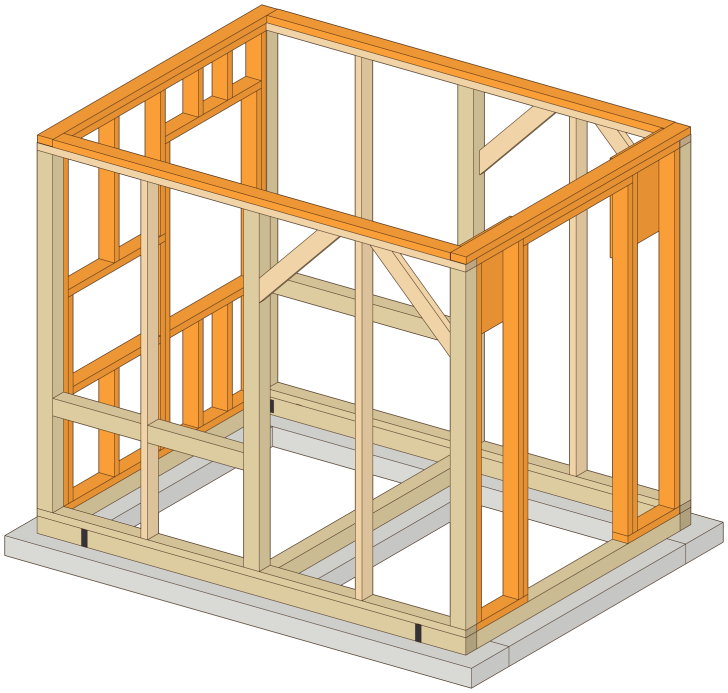

In the full plan: the stone strip, the sill joints and where each anchor goes.

2 WALLS

Four stud walls are built flat on the ground and tilted up. Six 4x4 posts and four knee braces make the open run stiff.

In the full plan: every stud, post, brace and opening with its measurements.

3 HOUSE FLOOR AND PARTITION

The house floor hangs between the walls on a ledger and a beam. The partition between house and run stands on it.

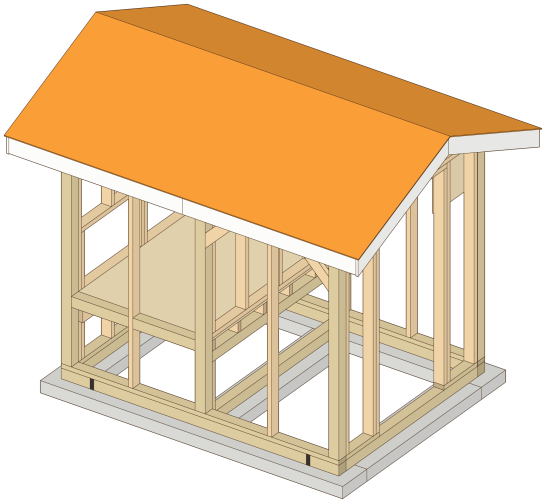

In the full plan: the ledger height, the joist layout and the pop door opening.

4 ROOF

Rafter pairs on a ridge board, tied across at the wall top, then plywood and shingles.

In the full plan: the rafter pattern with every cut, the ties and the overhang framing.

5 SIDING, HARDWARE CLOTH AND DOORS

Siding closes the hen house. Hardware cloth under battens closes the run, with an apron on the ground against digging.

In the full plan: the cloth plan, the nest box, the hatch, the run door and the inside of the house.
